

Coordinated Transition of CDM to 6.4 Mechanism

DUAN Maosheng
Tsinghua University, Beijing
March 15, 2021

What to transfer?

- 1) Technical standards such as CDM methodologies
- 2) CDM projects
- 3) CERs issued
- 4) Technical capacity?
- 5) Institutional capacity?
- 6) Financial resources?

Why coordination is needed?

- 1) No intellectual property regarding the technical standards and transparent project information
- 2) Promote a prompt start of 6.4 mechanism with the possible utilization of CDM infrastructure/capacities?
- 3) Avoidance of possible negative consequence e.g. double counting?
- 4) A clear understanding of the purpose is helpful to understand in which aspects coordination is necessary while in which aspects coordination is preferred

Necessary coordination

- 1) Not necessary with respect to the technical standards and capacities
- 2) With regard to CDM projects and credits
 - Coordination needed lies in the requirements on transition, e.g. approval and possible clarification of the host country authority, project registration date, CERs issued for emission reduction in a specific time period, which are not clear at this stage
 - CMA: request for assistance from CMP, to initiate the whole coordination process

Necessary coordination

2) With regard to CDM projects and credits

- CMP: authorizing CDM EB and CDM secretariat to provide relevant assistance, (soft) linkage of the CDM registry and the 6.4 registry, and utilization of CDM institutional capacities and financial resources
- CDM EB and 6.4 SB: elaboration of operational transition rules and procedures
- CDM EB, 6.4 SB and CDM secretariat: implementation of specific coordination activities
- CDM EB: authorizing CDM secretariat to provide relevant assistance
- Host country: approval of transition

Preferred coordination

- 1) Provision of information to assist the speedy transfer, e.g. experiences and lessons learnt from development of the technical standards, project information, by the secretariat as authorized by the CDM EB
- 2) Any other assistance needed by the 6.4 supervisory body
- 3) General authorization from the CMP and CDM EB maybe useful

Thanks
