

# **Carbon removals in the EU and considerations for designing an integration strategy for the EU-ETS**

**Judith Voß-Stemping & Dr. Julio G. Fournier**

The future of the EU ETS: Carbon removals

Stakeholders Roundtable

11.03.2024 – 16h00 CET (Zoom)

*Disclaimer: The German Environment Agency still does not have a position on the integration of carbon removals into the ETS and with this presentation does not argue for or against the integration.*

## Dimension of carbon removals for the EU 90 % GHG reduction target

- Communication for a 2040 GHG reduction target cp. to 1990
- Industrial Carbon Management Communication

} Impact Assessment Report (2024)

90% GHG reduction target: (i.e. <400 Mt. CO <sub>2</sub> net negative emissions & <= 850 Mt. CO <sub>2eq</sub> remaining gross emissions)	Carbon storage (CCS/BECCS/DACCS)	Carbon capture (Storage & Utilization)	Relationship b/w LULUCF net removals & industrial removals (BECCS/DACCS)	
			LULUCF	Industrial carbon removals
By 2040	~195 Mt CO <sub>2</sub> *	~280 Mt CO <sub>2</sub> *	317 Mt CO <sub>2</sub>	62 Mt CO <sub>2</sub>
			84%	16%
By 2050	<= 247 Mt CO <sub>2</sub>	<= 450 Mt CO <sub>2</sub>	333 Mt CO <sub>2</sub>	115 Mt CO <sub>2</sub>
			74%	26 %

\* The assumptions reflect the mean values of the target scenarios S2 and S3 of the Impact Assessment.

## Considerations for designing a strategy towards integration of CDR in the EU-ETS

- Provide **clear definition** of the **integration goal(s)**
- Considering all possible **scenarios**
- Do not ignore and prioritize the role of **natural sinks**
- Limit linking possibilities
  - Set clear **CDR target(s)** and limit their adjustment
  - Separate targets for different **CDR types**
  - Limit **cap adjustment** possibilities
  - Limit use of **intertemporal flexibility mechanisms**

**Vielen Dank für Ihre Aufmerksamkeit!**
